NeuroStar TMS Therapy® is indicated for the treatment of Major Depressive Disorder in adult patients who have failed to receive satisfactory improvement from prior antidepressant medication in the current episode.

You should talk with a NeuroStar physician to determine if TMS Therapy may be right for you.

In an NIMH-funded, independent, randomized controlled trial, patients treated with TMS using a clinical-trial version of the NeuroStar TMS System were four times more likely to achieve remission compared to patients receiving sham treatment ($P = 0.0173$; odds ratio = 4.05).¹

The most common side effect is pain or discomfort at or near the treatment site.²

NeuroStar TMS Therapy is only available by prescription. For full safety and prescribing information please visit NeuroStar.com.
